DIGITAL LITERACY

PROJECT

Introduction

In today's digital world, students use technology almost every day for studying, communication, and completing assignments. Because of this, I believe it is not only important to know how to use digital tools, but also to use them in a safe and responsible way. This project was based on different aspects of digital literacy such as making an infographic, creating an online portfolio, designing a quiz, writing professional emails, and learning about cybercrime awareness.

While working on these tasks, I got the opportunity to explore different platforms and understand their practical use. Each activity helped me learn something different. For instance, designing the quiz improved my thinking and creativity, while writing emails helped me understand the importance of formal communication. The cybercrime awareness part was especially useful because it made me more conscious about online safety, which I had not paid much attention to earlier.

Overall, this project was a good learning experience for me. It helped me realize that although using digital tools is easy, using them correctly and responsibly is much more important in today's time.

PROJECT REPORT

TASK 1

For creating my digital literacy infographic, I used Canva because it is simple to use and has many ready-made templates. It helped me arrange my ideas in a clean and visually appealing way without much difficulty.

My design focuses on explaining what digital literacy means and why it is important for students. It includes sections like the definition of digital literacy, useful digital tools such as Google Docs and Canva, safe internet practices, and tips for maintaining a professional online presence. I tried to keep the content short and clear so that anyone can quickly understand it just by looking at the infographic.

One thing I found a bit difficult was selecting the right amount of content. At first, I wanted to include more points, but then I realized that an infographic should not be too crowded. I also found it interesting how using colours, icons, and proper spacing can make information more engaging and easier to understand.

Overall, this activity helped me improve both my digital awareness and creativity.

PROJECT REPORT

TASK 2

For this task, I created profiles on GitHub, LinkedIn, Stack Overflow, and Kaggle. Each of these platforms has a different use and together they help in building a strong digital presence.

GitHub is mainly used for sharing coding projects, and I created a profile README to introduce myself and my goals. On LinkedIn, I added my education details and started building a professional profile. Stack Overflow is helpful for solving doubts, as people ask and answer technical questions there. I found Kaggle quite interesting because it provides real datasets and competitions related to data science.

Over the next four years, I plan to regularly upload my work on GitHub and improve my coding skills. I will keep updating my LinkedIn profile and use it to explore opportunities. I also want to use Stack Overflow whenever I get stuck and try Kaggle to practise working on real-world data.

Overall, these platforms will help me improve both my knowledge and practical skills.

PROJECT REPORT

TASK 3

For this task, I used Google Forms to create a digital literacy awareness quiz and Canva to design the infographic. Both platforms were easy to use and helped me understand how digital tools can be used for learning in a practical way.

While working on this, I built a quiz with different types of questions like multiple choice and short answers. It made me think from a student's perspective about what kind of questions are important and how awareness about digital safety can be tested. I also practised organizing information clearly while designing the infographic, making sure it was not too crowded but still informative.

One thing I found interesting was how these tools can make learning more interactive instead of just reading theory. Creating something on my own felt more engaging and useful.

These tools will definitely help me academically, especially for making assignments, presentations, and even conducting surveys or quizzes in the future. It has improved both my technical skills and creativity.

PROJECT REPORT

TASK 4

One situation where poor digital communication can cause problems is when a student sends an informal or unclear email to a professor. For example, a student might write something like “Hey, I need more time, will submit later” without any proper greeting, explanation, or respect. This can create a negative impression and the professor may ignore the request or even refuse it.

This kind of issue happens because the student does not follow basic email etiquette or fails to understand the importance of professional communication. It can lead to misunderstandings and affect the student’s academic relationship with the teacher.

This situation could have been handled better by writing a polite and clear email with a proper subject, respectful tone, and valid reason for the request. Using professional language shows seriousness and increases the chances of getting a positive response.

PROJECT REPORT

TASK 5

While researching this topic, what surprised me the most was how simple tricks are used to fool people into losing money. I didn't realize that something as basic as scanning a QR code could lead to money being deducted instead of received. It made me understand that cybercriminals mostly take advantage of lack of awareness rather than advanced hacking techniques.

One habit I will personally change is being more careful while making online payments. Earlier, I used to quickly scan QR codes without checking details, especially when I was in a hurry. Now, I will always verify the purpose of the transaction and double-check before approving any payment. This awareness will help me stay safe and also guide others around me.

Conclusion

Overall, this project helped me understand that digital literacy is not just about using technology, but also about using it in a careful and responsible way. Earlier, I used to think that just knowing how to use apps and tools is enough, but now I realize there is much more to it. Small things like how we communicate online or how we handle our data also matter a lot.

Through these tasks, I learned practical things like creating content, writing proper emails, and being more aware about online safety. I also realized that even small mistakes online can sometimes lead to bigger problems if we are not careful.

This project was quite useful for me because it made me think about my own habits. In the future, I will try to be more careful and use digital tools in a better and more responsible way.
